

Scarecrow

Wind powered constantly revolving visual deterrent

- Constantly moving visual deterrent based on the fear of man.
- Keeps birds moving over large acreages when they get used to your gas-gun.
- Revolves in just a breath of wind.
- Silent.
- No running costs.
- Excellent deterrent against predators - protecting free range poultry and pheasant poults from buzzards, and protecting fish from cormorants
- Ideal for arable crops, horticulture, soft fruits, vineyards.
- Perfect complement to all audible and ultrasonic bird deterrents by providing the additional variety of a moving visual deterrence.
- Optional mirror crown which flashes with every movement.
- Easily assembled and removed.
- Constructed of high grade materials with years of life.

Now you see it

Now you don't

Now you do

Each of the two scarecrows comprises a human profile made out of tough reinforced long life PVC which is stretched over an easily assembled steel and aluminium frame to create an S shaped aerofoil which has a screen printed human figure on one side and is predominantly white on the reverse side. This revolves on good quality bearings in the slightest breath of wind, with the whole body being held securely upright, even in the strongest winds, on a metal fencing spike.

Optional mirror crown which flashes with every movement.

Queries and helpful hints

The principal reason for the effectiveness of the Wind Powered Constantly Revolving Scarecrow is the “now you see it... now you don’t” effect with each 90 degree turn within the 360 degree rotation and the predominately white surface which can be seen at a great distance.

Why is the scarecrow predominantly white? Ancient country lore and experience suggest that this is the most effective colour. However, special vinylcoat paint is available in spray-cans for those who prefer the reverse side to be brightly coloured, thus creating extra contrast.

How do I install the spike vertically? Hang a plumbline over the horizontal top edge of the spike and line up with the vertical groove in the spike. Then do likewise on the next adjacent side to ensure vertical entry into the ground.

Will it stay upright in strong winds? Yes. Extra fins on the spike below ground level add to stability.

How can I move the spike? Simply lever under the box shoulder of the spike using a long metal bar or post, making sure that the leverage is firm by putting a brick or stone in between the ground and the bar/post. Extra spikes are also available on their own for those who may wish to move the scarecrow around to different locations whilst leaving the spikes in the ground.

Is there any maintenance? Just grease the bearings periodically.

Technical Specification

Construction

Frame: Powder-coated steel spine, aluminium stretchers.

Figure: Reinforced PVC.

Spike: Heavy gauge steel.

Size

Height above ground: 191cm (6' 3")

Width: 82cm (2' 8")

Length of spike: 61cm (24")

Weight

Scarecrow: 6kg

Spike: 2.8kg

Bearing block: 3kg
